## COMPANY PROFILE

### WHO ARE WE?

*“Fuel Management Africa (FMA) is a company that specialises in providing fuel management solutions to clients.”*

**FMA** has systems installed throughout various parts of the world with a specific emphasis on bulk commercial fuel users. Many of these installations are in very remote and harsh areas.

We currently have solutions installed throughout Africa, South America, Australia and the Pacific Rim countries.

**Fuel Management Africa** strives to fulfil the large gap which exists in the market to provide economical solutions with interchangeable dynamics. Catering for small, medium and large entities who consume or sell large and smaller quantities of fuel.

Fuel management Africa provides a completely cloud based reporting platform to bulk fuel resellers and consumers, providing Management with offsite visibility and control. Ideal for single site or multiple site management environments.

### OUR VISION

- To become the best solution provider for our clients.

- Giving our Clients **clearer** and **more accurate visibility** of their **fuel consumption** and **efficiencies**.

- A constant focus on **new technology** combined with our in-house sophisticated development team give FMA the edge in providing **integrated** and **relevant solutions**.

THE DIFFERENCE BETWEEN GUESSING AND KNOWING

# PRODUCTS & SOLUTIONS:

## MANUAL ENTRY WEBSITE ACCESS

- Smaller entities can use the FMA website to manually capture transactional data, fuel deliveries, opening and closing dips etc. the FMA website will produce reports without having hardware (capital outlay) upfront.
- A firm operational input is required for the desired reporting output.

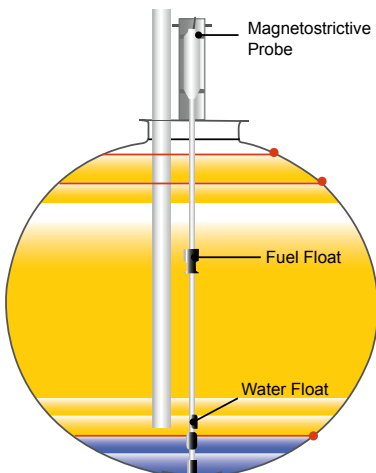

## ST500 PUMP CONTROLLER

- FMA hardware connected to the pump will automate recording of transactional data by authorising vehicles / drivers / attendants / operators to dispense fuel.
- The ST500 pump controllers post the recorded data to the website for reporting via website.

## AUTOMATIC TANK GAUGING

- Automated volume, water, temperature and mm readings. Providing real time levels via the FMA website.
- Ideal for retail service stations as well as commercial bulk fuel consumers.
- ATG limits human intervention and irregular readings.
- When combining ATG with ST500 dispensing control, complete site reconciliations are produced for a comprehensive reporting structure.

## FUEL CONSUMPTION ANALYSE

- FMA have expanded to provide Clients with detailed consumption viewing of fuel
- Clients can monitor onboard fuel consuming equipment and onboard fuel tanks by use of independent probes inside HDV or equipment fuel tanks.
- Generator levels and consumption can be monitored separately and effectively.
- Combining GSM technology enable a geolocation of the vehicle / equipment at the time of consumption.
